EFEZINO TAIGBENU

Lagos, Nigeria | +234 902 105 1844 | taigbenuefezino@gmail.com | linkedin.com/in/efezino-taigbenu-8a769a285 | github.com/Zinolesky

PROFESSIONAL SUMMARY

Backend and Mobile Software Engineer specializing in Python (Django, FastAPI) and cross-platform mobile development (React Native, Flutter). Experienced in architecting containerized microservices with Docker, optimizing spatial and relational databases (PostgreSQL, PostGIS, SQLite), and integrating generative AI APIs into production workflows. Proven track record of leveraging agentic AI coding tools to rapidly scaffold, test, and deploy scalable full-stack applications.

TECHNICAL SKILLS

- **Languages:** Python, SQL, HTML/CSS, Dart, JavaScript/TypeScript, Go, Kotlin
- **Backend & Desktop Frameworks:** Django, Flask, PyQt5, FastAPI, Microservices Architecture, REST APIs
- **Mobile & Cross-Platform:** React Native, Flutter, Custom Painter, React Native for Web (PWA)
- **Databases & Spatial:** PostgreSQL, PostGIS, SQLite, JSI SQLite
- **Cloud, DevOps & Testing:** Docker, Docker Compose, Heroku, pytest, Git, GitHub, Windows Task Scheduler
- **AI & Developer Tools:** Gemini API, PyMuPDF, Google Maps API, Antigravity, Antigravity 2.0, VS Code, PyCharm, Android Studio

WORK EXPERIENCE

Pufferfish Technology Limited — Lekki, Lagos State

Industrial Training Intern, HR & Administration | August 2024

- Maintained 100% data accuracy across 100+ master employee datasets by engineering structured spreadsheet workflows with automated validation rules.
- Reduced cross-departmental record request turnaround time by 25% by automating administrative document tracking and reporting pipelines.
- Delivered structured weekly executive reports for senior management by executing quantitative audits on employee administrative records.

- Improved database retrieval speed by standardizing digital record-keeping protocols and establishing consistent schema formats across HR systems.

SOFTWARE ENGINEERING PROJECTS

Distributed Anti-Spam Call Screening Application | October 2026

React Native, Kotlin, JSI SQLite, Python (FastAPI), Go, Docker Compose

- Architected a containerized microservices backend using Python FastAPI and Go, orchestrated via Docker Compose for isolated multi-service deployment and horizontal scalability.
- Engineered native Android call-screening modules in Kotlin bridged to a React Native frontend to intercept and evaluate incoming caller metadata in real time.
- Achieved sub-millisecond local caller reputation lookups on-device by integrating JSI SQLite for high-speed offline database querying.

AI-Powered Real Estate PDF Auto-Filler (Progressive Web App) | October 2026

React Native for Web, Python (FastAPI), PyMuPDF, Gemini API

- Built a cross-platform Progressive Web Application that automates complex real estate contract and form completion.
- Integrated the Google Gemini API with a FastAPI backend to extract, validate, and map unstructured client data onto structured document fields.
- Automated programmatic PDF parsing, coordinate mapping, and document rendering using PyMuPDF, eliminating repetitive manual data entry.

ChatFlow — Video-First Social Media Application | October 2026

React Native, Antigravity 2.0

- Developed a mobile video-sharing application featuring a hybrid Reel-style playback engine built in React Native.
- Engineered seamless state transitions that bridge shared direct-message (DM) video playlists directly into a continuous algorithmic discovery feed.
- Accelerated UI scaffolding, gesture handling, and playback optimization utilizing agentic AI development workflows in Antigravity 2.0.

The Road to Python — Interactive Curriculum Platform | October 2026

Python, Web Application, Heroku

- Built and deployed a centralized web platform hosting a structured Python programming roadmap and video curriculum.

- Configured cloud production environments, Procfiles, and deployment pipelines on Heroku for reliable public hosting.

Mobile Campus Navigation System (Final Year Project) | June 2026

React Native, Django, PostgreSQL, PostGIS, Google Maps API

- Delivered dynamic venue discovery and location routing across university campus grounds by engineering a full-stack mobile spatial application.
- Reduced spatial query response latency by architecting a PostgreSQL database with PostGIS spatial indexing (GiST) for distance calculations.
- Rendered real-time interactive mapping, custom location markers, and polyline navigation paths by integrating Google Maps REST APIs with React Native.
- Connected mobile search requests to spatial database queries under 150ms average response time by building scalable RESTful API endpoints in Django.

Flutter 2D Football Tactical Whiteboard | July 2026

Flutter, Dart, Custom Painter

- Enabled real-time pitch drawing, formation modeling, and chalkboard tactic animation by developing an interactive strategy visualization tool.
- Achieved smooth 60 FPS graphics rendering by implementing Flutter's native Custom Painter API for field overlays and trajectory lines.
- Enabled fluid player token manipulation and instant canvas state resets by building custom gesture-handling and drag-and-drop controls.

Automated File Management & Sorting System | January 2026

Python (os, shutil), Windows Task Scheduler

- Eliminated manual folder clutter and reduced routine file management overhead by 90% by automating directory organization and file sorting.
- Filtered files by extension, applied creation-timestamp metadata to file renames, and routed assets into structured subfolders by engineering custom Python automation scripts using os and shutil.
- Ran sorting routines automatically at system log-on without manual intervention by configuring background task automation with Windows Task Scheduler.

PyQt5 Desktop Applications | September 2025

Python, PyQt5, pytest

- Delivered a desktop weather application and unit conversion tool by constructing modular desktop utilities with custom event handling and responsive UI layouts.

- Validated conversion calculations and prevented application UI state crashes by automating unit testing workflows using pytest, achieving high test coverage.

EDUCATION

Bowen University — Iwo, Nigeria

Bachelor of Science in Computer Science | GPA: 3.2 | Graduated June 2026

- Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, System Architecture, Compiler Design, Discrete Mathematics, Operating Systems, Human-Computer Interaction (HCI), Artificial Intelligence (AI)
