EFEZINO TAIGBENU

Backend & Mobile Software Engineer

Lagos, Nigeria | +234 902 105 1844 | taigbenuefezino@gmail.com | linkedin.com/in/efezino-taigbenu-8a769a285 | github.com/Zinolesky | portfolio-mu-one.vercel.app

PROFESSIONAL SUMMARY

Backend and Mobile Software Engineer specializing in **Python (FastAPI, Django)**, **.NET 8 (C#, ASP.NET Core)**, **Go**, and cross-platform mobile development (**React Native, Flutter**). Experienced in architecting offline-first retail and mobile systems, containerized microservices with Docker, spatial and embedded databases (PostgreSQL, PostGIS, SQLite WAL, JSI SQLite), and production generative AI workflows.

TECHNICAL SKILLS

Languages: Python, C#, Go, Kotlin, Dart, TypeScript / JavaScript, SQL
Backend & Desktop: FastAPI, Django, ASP.NET Core (.NET 8), Entity Framework Core 8, WPF (MVVM), Flask, REST APIs, Microservices Architecture
Mobile & Cross-Platform: React Native, Flutter, CustomPainter, Android Native Modules (Kotlin), React Native for Web (PWA)
Databases & Spatial: PostgreSQL 16, PostGIS (GiST Spatial Indexing), SQLite (WAL Mode), JSI SQLite
Cloud, DevOps & Testing: Docker, Docker Compose, Vercel, Railway, pytest, xUnit, Git, GitHub
AI, Security & Hardware APIs: Google Gemini API, PyMuPDF, Google Maps API, Argon2id & Windows DPAPI, ESC/POS & USB HID

SOFTWARE ENGINEERING PROJECTS

Prime Supermarket POS (v2.2) — Hybrid Offline-First Retail System [GitHub] November 2026
.NET 8 (C#), WPF (MVVM), ASP.NET Core Minimal APIs, EF Core 8, SQLite (WAL), PostgreSQL 16, Docker Compose

- Engineered an enterprise offline-first retail POS terminal in .NET 8 and WPF (MVVM) with sub-15ms local authentication (Argon2id + Windows DPAPI), automated SQLite WAL hot backups, and a containerized ASP.NET Core + PostgreSQL 16 cloud backend.
- Built a resilient bidirectional Outbox cloud synchronization engine featuring idempotent sales/returns replication, exponential retry backoff (1s–64s), and a Dead-Letter Queue (DLQ) for per-item inspection and replay.
- Implemented GS1 variable-measure EAN-13 barcode decoding, wholesale tier pricing, customer loyalty & store credit wallets, CSV catalog import/export, raw ESC/POS thermal receipt spooling (winspool.Drv / TCP 9100), and blind Z-Report shift reconciliation.

Distributed Anti-Spam Call Screening Application (HushLine) [Live Docs] October 2026
React Native, Kotlin, JSI SQLite, Python (FastAPI), Go, Docker Compose

- Architected a containerized microservices backend using Python FastAPI and Go, orchestrated via Docker Compose for isolated multi-service deployment and horizontal scalability.
- Engineered native Android `CallScreeningService` modules in Kotlin bridged to a React Native frontend to intercept and evaluate incoming caller metadata in real time.
- Achieved sub-millisecond (<1ms) local caller reputation lookups on-device by integrating JSI SQLite for high-speed offline database querying.

Mobile Campus Navigation System (Final Year Project) [GitHub] June 2026
React Native, Django REST Framework, PostgreSQL, PostGIS, Google Maps API

- Engineered a full-stack mobile spatial application delivering dynamic venue discovery and turn-by-turn routing across Bowen University campus.
- Reduced spatial search latency to under 150ms average response time by architecting a PostgreSQL database with PostGIS GiST spatial indexing exposed via scalable Django REST endpoints.
- Integrated Google Maps APIs with React Native to render real-time interactive venue markers, proximity filtering, and polyline walking/driving navigation paths.

AI-Powered Universal PDF Auto-Filler (Progressive Web App) October 2026
React Native for Web (PWA), Python (FastAPI), PyMuPDF, Google Gemini API

- Built a cross-platform Progressive Web Application that automates complex contract and form completion across user-uploaded PDF documents.
- Integrated the Google Gemini API with a FastAPI backend to extract, validate, and map unstructured client data onto structured document fields, paired with programmatic coordinate stamping via PyMuPDF.

ChatFlow — Video-First Social Media Application October 2026
React Native, TypeScript

- Developed a mobile video-sharing application featuring a hybrid Reel-style playback engine with seamless state transitions bridging direct-message (DM) video playlists into a continuous discovery feed.
- Engineered gesture-driven vertical reel navigation and viewport video pre-buffering for low-latency playback transitions.

Flutter 2D Football Tactical Whiteboard July 2026
Flutter, Dart, CustomPainter

- Built an interactive football strategy visualization tool supporting real-time pitch drawing, authentic team formation modeling, and 60 FPS canvas rendering via Flutter's native `CustomPainter` API and drag-and-drop token controls.

The Road to Python — Interactive Curriculum Platform [GitHub | Live] October 2026
Python, Django, Vercel

- Built and deployed a centralized full-stack web platform hosting a structured 9-phase Python programming roadmap and video curriculum with automated cloud deployment on Vercel.

WORK EXPERIENCE

Pufferfish Technology Limited — Lekki, Lagos State August 2024
Industrial Training Intern, HR & Administration

- Maintained 100% data accuracy across 100+ master employee datasets by engineering structured spreadsheet workflows with automated validation rules.
- Reduced cross-departmental record request turnaround time by 25% by automating document tracking and reporting pipelines.
- Standardized digital record-keeping schemas across HR systems and delivered weekly quantitative audit reports for senior management.

EDUCATION

Bowen University — Iwo, Nigeria Graduated June 2026
Bachelor of Science in Computer Science

- **Relevant Coursework:** Data Structures & Algorithms, Database Management Systems, System Architecture, Operating Systems, Compiler Design, Object-Oriented Programming, Artificial Intelligence.
